

ITSmartSolutions

Smart IT Management

Want your technology and cloud management taken off your hands? Need an IT partner to be on call when you need them? We've got the solution for you.

Migrations. Backups. Maintenance. Security. Internet. Cloud. On-Premise.

IT management is a complex and resource-heavy business necessity. Technology should help you work smarter, not harder.

Smart IT Management from IT Smart Solutions gets you back to working on your business, not worrying about the technology powering your business.

Our monthly plans are customisable – pick and choose any combination of IT support – and they're flexible to fit with your business needs as they change and grow. Or, if monthly plans aren't your thing, engage us on an hourly rate whenever you need IT support.

It's called **Smart IT Management** for a reason!

What we do

Support and Maintenance

We give you support across a range of business technology areas such as desktop, server, Office 365 and security.

Onsite Engineers

We supply permanent onsite engineers (if required). Need some extra help when your engineers go on holiday? Or need a full-time presence in your organisation? We can help.

Backup and Disaster Recovery

We handle your data, so you don't need to worry! We backup your on-premise and cloud data, and if you suffer a data disaster, we'll get you back up safe and sound.

Migration Services

Need to migrate your on-premise files to the cloud? Want to implement Office 365 but not sure where to start? We're experts in migrations.

Strategic Consulting

We ensure your business is using the right technology, at the right cost, for your needs.

Support Plans

Pick and choose from our menu of IT support options. Scale up and down as needed and pay flexibly via monthly plans or hourly rates.

BONUS: Office 365 subscriptions automatically included in any monthly plan. Just another thing you don't need to think about!
